Workshop Outline and Speakers

Description

This conference brings together leading researchers in operations research, stochastic optimization, variational analysis, risk-averse optimization, machine learning, finance, and engineering applications. The workshop is organized in honor of Stan Uryasev's 70th birthday and is intended as a high-level academic event for faculty, students, and researchers interested in modern developments in operations research and its applications.

The program will focus on topics including:

- **Convex and Nonconvex Optimization**
- **Applications of Stochastic Optimization in Statistics and Machine Learning**
- **PDE-Constrained Optimization**
- **Mixed-Integer Optimization**
- **Stochastic Dynamic Programming**
